SUMMARY

Engineer who builds production systems with large language model (LLM) agents inside the runtime, not demos. Sole engineer on a nationwide property-deed retrieval platform where an agent layer maintains 77 vendor-portal integrations under hard budget caps and a human approval gate. Python and TypeScript across backend, frontend and mobile, with a test suite larger than the source it covers.

EXPERIENCE

AI Engineer | United Financial Resources | Bradenton, FL | April 2026 – Present

- Sole engineer (**98% of commits**) on an automated property-deed retrieval platform with **nationwide U.S. county coverage** — one dispatcher routing each request to **77 vendor-specific portal integrations** across Tyler, Kofile, Fidlar, GSCCCA, AINS and others
- Built an **autonomous agent layer** on Anthropic and OpenAI tool-use loops that repairs and extends those integrations as portals change, constrained by hard budget caps, iteration limits, and a human approval gate on any action that spends money or mutates the database
- Engineered **browser automation with Playwright** across hundreds of distinct portal interfaces — authenticated sessions, paywall handling, anti-bot-aware flows and PDF validation
- Designed the **Python/FastAPI service and pip-installable SDK** the CRM consumes, on PostgreSQL with row-level security (RLS), asyncio concurrency and a Streamlit operations dashboard over scheduled audit jobs
- Maintained a **test suite larger than the source it covers** — 68,672 lines of tests to 50,302 of source — with **46 architecture decision records** and automated security scanning gated on every pull request in CI/CD
- Shipped **120 pull requests at a 93% merge rate** across Python backend and TypeScript frontend
- Built the internal **multi-agent AI Hub** client — Next.js 16 and React 19, a custom NDJSON streaming protocol, Zustand state architecture and artifact rendering — against a Python/FastAPI/Agno backend carrying 1,300+ unit tests and ~200 end-to-end (E2E) tests. Shipped through review by three engineers
- Exposing deed retrieval as a first-class agent tool over **Model Context Protocol (MCP)** — +16,300 lines across the backend service and client

Full-Stack Developer (Freelance) | Self-employed | Remote | January 2025 – Present

- Institutional site and course sales pages for a clinical psychology practice (suelirepulho.com.br) — **Astro**, a full design system across a warm editorial site and a dark subscription product, SEO- and mobile-first, delivered under shared-hosting constraints with CI security gates on every merge
- **LeadFlow CRM** for an electronics reseller — Kanban pipeline with drag-and-drop, contact and company database, product catalog with stock management, and LLM deal-health analysis returning score, status and recommended next action (Next.js, TypeScript, Supabase/PostgreSQL, Google Gemini API)
- Owned the full lifecycle: requirements, build, deployment and client handoff

Earlier: Insurance Agent, healthinsurance.com (2024–2025) · Warehouse Operations Associate, Amazon Robotics (2023–2024) · Production Associate, Tesla (2018–2023)

SELECTED PROJECT

Forja — Offline-First Training App | app.forjahybrid.com | iOS TestFlight | github.com/EduardoVisconti/forja-case-study

- React Native app where the **device is the source of truth** and the server reconciles in the background, keeping it fully usable with no network connection
- Deletions sync as **tombstones** under the same last-write-wins rule as any write, removing record resurrection by construction rather than by patch
- Date-sensitive tests run under a **non-UTC timezone** — a suite running in UTC cannot distinguish local day from UTC day, so every off-by-one-day bug passes CI and ships
- Layer boundaries (service → hook → component → screen) **enforced by an automated gate** that fails the pull request, not by convention
- React Native (Expo SDK 54), React 19, TypeScript 5.9 strict, Zustand, Supabase (Auth, PostgreSQL, RLS)

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript (ES6+), SQL, PL/pgSQL, HTML, CSS

AI Systems: Large language model (LLM) agents, Anthropic Claude API, OpenAI API, Google Gemini API, tool-use loops, Model Context Protocol (MCP), retrieval-augmented generation (RAG), agent budget and approval control, streaming responses

Backend: FastAPI, asyncio, Node.js, Express, REST APIs, Agno, JWT authentication, role-based access control (RBAC)

Databases: PostgreSQL, row-level security (RLS), schema migrations, Supabase, Firebase, Firestore

Frontend: React, Next.js, React Native, Expo, Astro, Electron, Zustand, TanStack Query, React Hook Form, Zod, Tailwind CSS, shadcn/ui

Testing & Automation: pytest, Jest, Vitest, Playwright, browser automation, web scraping, unit, integration and end-to-end (E2E) testing

DevOps & Tools: Docker, Git, GitHub Actions, CI/CD, automated security scanning, Streamlit, Vercel, Railway

Spoken: English (fluent), Spanish (fluent), Portuguese (native)

EDUCATION

Systems Analysis and Development (A.S.) | Anhanguera Educacional | July 2024 – June 2026 (expected)

Web Development | Truckee Meadows Community College | 2019 – 2020

Authorized to work in the United States · Open to Tampa Bay on-site, hybrid, or remote
